- Creative approach

Pet Projects

demensky/value-transformer

Validation, serialization and deserialization using a single entity. Symmetric serialization and deserialization. No implicit transformers.

Language

- English:
  - technical - C1
  - spoken - B1
- Ukrainian - C2
- Russian - C2

Experience

Livatek (ordrestyring.dk)
Sept. 2022 - Sept. 2023

Project: Web application of effective digital tools for managing and monitoring orders, time and finances for business and everyday life. Dashboard. Time management.

Work: Support and improvement of the management system. Improving the code base. Updating out-of-date dependencies.

Stack: Angular, TypeScript, GraphQL, RxJS, SCSS, and Apollo.

Room4 (azarus.io)
Dec. 2019 - Feb. 2022

Project: Gaming platform (startup). Streaming monetization. Item store. NFT Membership.

Work: Development of Twitch extensions, admin pages and websites. Created JSON-RPC like protocol via WebSocket. Designed a large monorepository, isomorphic and strictly type-safe code.

Stack: Angular, NestJS, RxJS, JSON-RPC, Node.js, WebSocket, TypeScript, and SCSS.

Citrus
Oct. 2018 - Jan. 2019

Project: Ukrainian online store of digital equipment.

Work: Creating new interface elements and store functionality.

Stack: Vue.js, Knockout.js and CSS.

Andersen
Dec. 2016 - July 2018

Project: Digital banking. A collection of UI components for front-end development for the banking industry.

Work: Develop a universal UI library that will be reused by other development teams. Designers and developers reduced work time by reusing the common UI system.

Stack: Angular, TypeScript, RxJS, and SCSS.

HostingMaks
Sept. 2013 - Nov. 2016

Project: Many web-sites (landing pages, multi-page and other).

Work: Unit tests for server API. Admin panel for platform module. Layout and improvement of sites on a ready-made platform.

Stack: Knockout.js, TypeScript, JavaScript, HTML, CSS, and Less.
